

Lithium Golf Cart Charging Instructions

1

Charger is located under the front seat for a 4-seater and under the middle seat for a 6-seater golf cart.

2

The lithium golf cart charger system consists of a converter unit, a specific DC outlet plug, and an AC input cord.

3

The DC outlet plug is the green plug which will connect to the charging port.

4

Remove the green DC outlet plug in order to connect to the charging port. Do not remove the zip tie on the cable as this prevents the cable from falling out of the battery compartment while driving.

5

Connect the green DC outlet plug to the charging port.

6

Remove the black AC input cord. Do not remove the zip tie on the AC input cable as this prevents the cable from falling out of the battery compartment while driving. Put the seat back in place.

7

Remove the provided 25 foot 12 gauge extension cord from under the rear seat bucket (this is the same location for both the 4-seater and 6-seater golf carts).

8

The 25 foot 12 gauge extension is red. Do not use any extension cord that has not been provided by Coastal Beach Carts. Please contact us if a longer extension cord is needed.

9

Connect the extension cord to the AC input cord.

10

Plug the 3-prong extension cord into any standard outlet/receptacle.
